Chemistry Lab

Botanical Garden

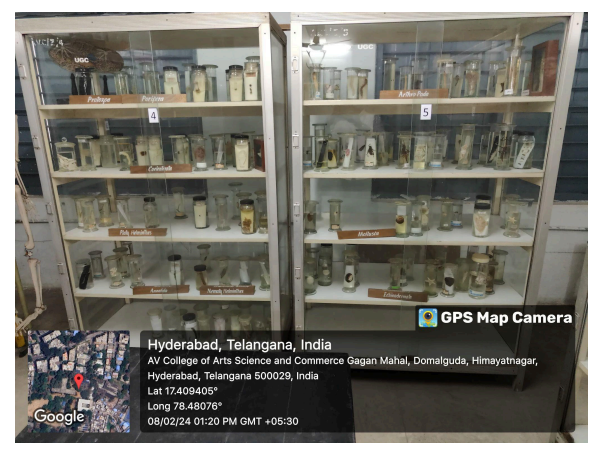

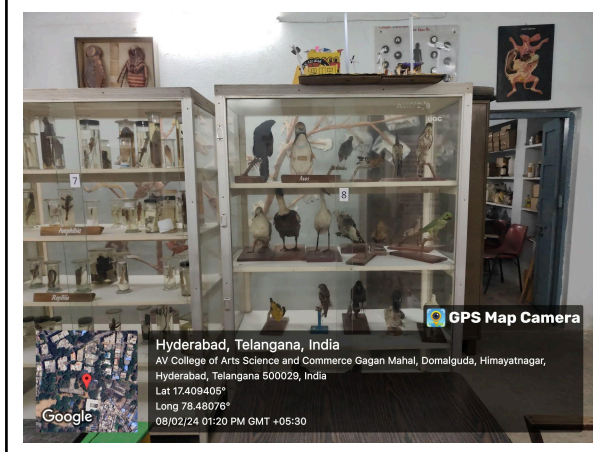

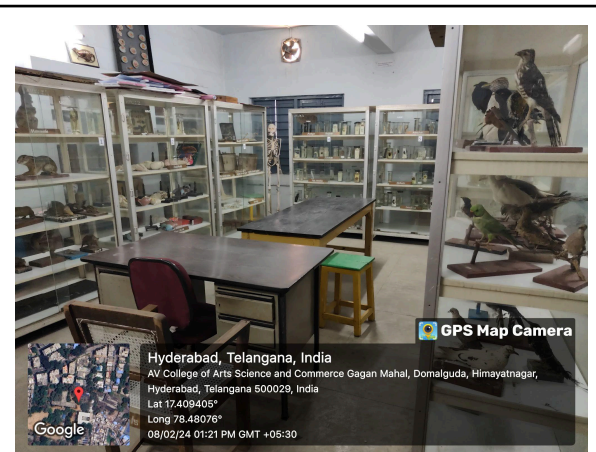

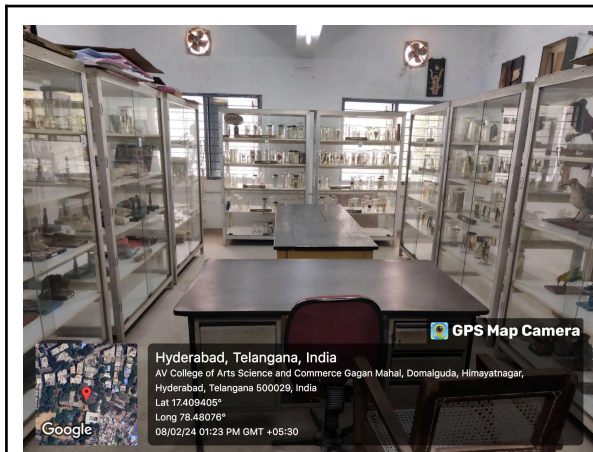

The Department of Botany established the Botanical Garden in the year 2011 to conserve the flora, especially the rare and endangered species. The layout of the garden is based on Bentham and Hooker's Classification with 146 species covering 59 families. It is one of its kind in the state. All Plants are labelled with Botanical and Vernacular Names.

The garden is a centre of attraction not only for its beautiful layout but also for its rich and varied botanical resources which include a variety of trees, shrubs, and leaves well known for their medicinal uses. This helps students understand and appreciate plant taxonomy. Garden is open to other colleges and schools as well.

Museum

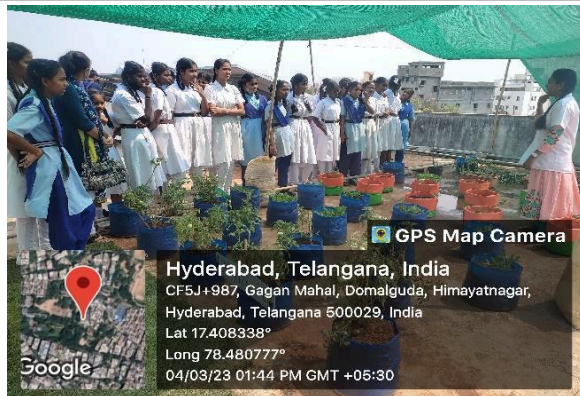

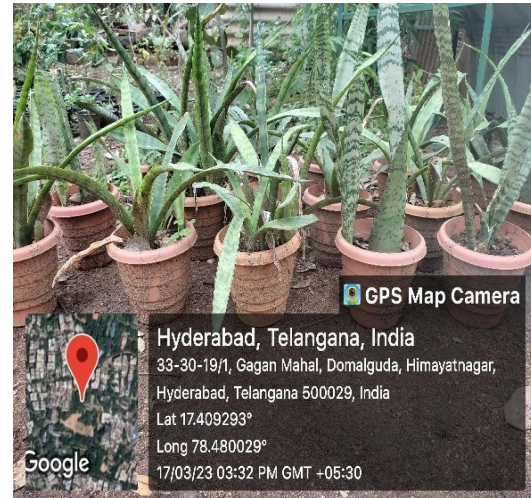

Museum with lots of specimens of the animal kingdom.
